Defiant v1.0.1 cheatsheet - https://github.com/Serrin/Defiant

Import	Javascript
import the defaultExport object	import defaultExport from "./defiant.js"; globalThis.defiant = defaultExport;
import with default with name	import { default as defiant } from "./defiant.js"; globalThis.defiant = defiant;
import all into a new defiant object	import * as defiant from "./defiant.js"; globalThis.defiant = defiant;

import functions	import { Tuple, Record } from "./defiant.js";
	globalThis.Tuple = Tuple;
	globalThis.Record = Record;

Function	Description
Tuple(...values);	Creates a frozen array (tuple) from the given values.
Tuple.of(...values);	Alias for Tuple(...).
Tuple.from(iterable);	Creates a tuple from an iterable or array-like object.
Tuple.isTuple(value);	Checks whether a value is a frozen array.
Tuple.isEqual(x, y);	Performs a deep equality check between two values (Arrays and Objects).
Tuple.toArray(value);	Converts a tuple to a mutable array (shallow copy).
Tuple.VERSION;	The version info of the library.
Record(object);	Creates a frozen copy of an object.
Record.fromEntries(entries);	Creates a record from an iterable of key-value pairs.
Record.fromObject(object);	Alias for Record(object).
Record.isRecord(value);	Checks whether a value is a frozen object.
Record.isEqual(x, y);	Alias for Tuple.isEqual.
Record.toObject(value);	Converts a record to a mutable object (shallow copy).
Record.VERSION;	The version info of the library.
